[Overview]

The goal of the JUMONEY project is to have as many people as possible 'activities' consistently. It utilizes a reward system to motivate people to 'activities.'

The definition of 'activity' in this project is not limited to 'exercise'. Ordinary behaviors in daily life can also be included in 'activity', which sets them apart from other 'fitness platforms'. The fact that the standard of compensation is not limited to just one-dimensional 'move to earn' service, which is also different from other popular 'M2E' services.

The project team is composed of experts who have worked on many fitness and healthcare projects. In the process of preparing for the project, the project team studied many people's lifestyle, activity routines, eating habits, exercise methods and patterns, and analyzed various reward platforms and M2E projects to collect meaningful data to build a sustainable fitness reward ecosystem.

Based on these studies and analyses, the project team has come to the simple but clear conclusion that fitness exists everywhere in everyday life and that anyone can achieve their fitness goals. Even small daily practices like drinking another cup of water, taking another public transportation, or taking vitamins on a regular basis can be fitness for someone. Walking with a close person or dog, sprinting 3km per day, or getting a good night's sleep can all be fitness for someone.

The "Pocket Gym" service ecosystem provides users with well-being goals through Quest and rewards them upon completion. Users can use the rewards they have earned for well-being-related uses again, which creates a virtuous cycle of well-being life. In the future, the "Pocket Gym" service will provide global services through collaboration with various affiliates so that many people around the world can experience fitness in their daily lives, and will create a world where health becomes an asset through the token reward ecosystem.

[PROJECT INFO]

I. The Purpose of Project

1. Background

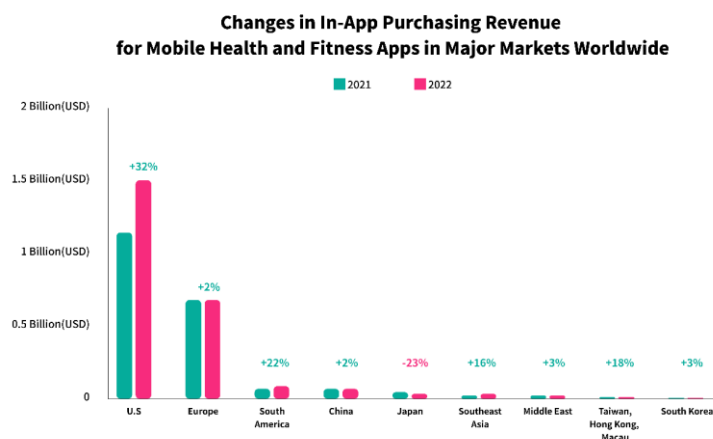

1) Online health & fitness market

When we are currently talking about the online fitness industry, we cannot help but discuss the COVID19 pandemic. The history of the online fitness industry can be largely divided into before and after the COVID19 pandemic, and to understand the online health and fitness markets, comparing the pre-pandemic market with the one that exploded during the pandemic is effective.

With many restrictions on daily life during the pandemic, the demand for online fitness has increased. Health and fitness app downloads in the global market stood at 2.48 billion as of 2021, up 26% from pre-pandemic times. That's double the growth rate of overall app downloads compared to 13% over the same period.

Next, if you look at the South Korea market which is the SOM(Serviceable Obtainable Market)¹ of this project, the number of downloads of health and fitness apps during the same period was 56 million, showing a 40 percent growth. This is 50% higher than the global average, and this rapid growth has created an opportunity for many health and fitness companies in Korea to enter the market with great expectations of success. Let's take a look at what the companies involved have achieved.

2) In app sales of Health & Fitness apps during Pandemic in South Korea

Sources: Sensor Tower, 2023

¹ SOM(Serviceable Obtainable Market) refers to a market that a company can actually secure, and is the "practically achievable market size" estimated by considering realistic constraints such as competition, resources, and distribution capabilities.

According to the table above, domestic health and fitness in-app sales are showing very poor results compared to 56 million downloads.

Among the 56 million downloads, the top five most downloaded apps are i) The Health Insurance, ii) Jeju Safety Code, iii) Cashwalk, iv) Health Status Self-Diagnosis, and v) Electronic Access List (Source: App Annie, 2022.) Among them, The Health Insurance (Health Insurance Corporation) and Health Status Self-Diagnosis (Ministry of Education) are public apps that have nothing to do with profits, and Jeju Safety Code and Electronic Access List are public service apps for COVID-19 check. Excluding Cashwalk, we can see that there is little commercially significant correlation between 56 million downloads and in-app sales of general companies.

3) Reasons for the Poor Performance of Commercial Service Apps

a) Competition with free services from global and large corporations

① YouTube

79% of YouTube viewers said they watch sports & fitness-related content through YouTube, rather than through regular fitness apps (source: Google/lpsos Connect, Sports Viewers study, US aged 18-54). Despite the inconvenience of watching advertisements and lacking features like an exercise curriculum or physical examination algorithm that suits me, many users chose YouTube. For fitness apps whose paid content is the Cash Cow of the business, the existence of YouTube, where all the content is free, acted as a huge barrier.

② Free fitness service for large companies aimed at selling products

If you use Samsung Health Service, the world's No. 1 healthcare app, you can see that its functions, interfaces, and compatibility with wearables are superior to any other paid fitness service. Because Samsung Health's service is a kind of public app designed to sell products such as mobile devices and wearable devices, it has a different starting point from general fitness services. Similar apps such as Nike, Adidas, and Underarmour have similar characteristics.

b) A 'Exercise'-oriented service

According to the Bureau of Labor Statistics (2022), about 30 percent of adults in the U.S. regularly participate in exercise or sports activities. Even in the U.S., where personal GDP is high, exercise is a part of daily life, and where the best exercise infrastructure is at 30 percent, the global average would be lower. Even with a high sampling error rate applied to these statistics, it is estimated that the population who exercises irregularly and rarely exercises will exceed 60 percent of the total population. Population groups like this have problems that cannot be solved with conventional fitness apps alone. A closer look at this area is as follows.

Whether it's a fitness brand app from a large company that we're familiar with or a rather adventurous app from a small group of startups, the structure of the app is mostly based on the level of exercise / purpose / part of exercise / type of exercise. The problem is that even content for beginners, not the structure of the app, is provided in the form of an "exercise" program. Some apps take more than 40 minutes to exercise, even though they're "first-timers." This is where the key issue lies.

The 30% of the population who exercise regularly is difficult to be seen as a potential consumer of fitness

apps because they are people who can exercise at their will, whether it's in an offline fitness center, park, or mountain environment. Therefore, the more than 60% of the irregular exercise population, the true potential demand for fitness apps, are people with no exercise habits, and the key issue may be that the approach that they will watch home training apps and follow their workouts can be difficult.

4) Study of Cashwalk

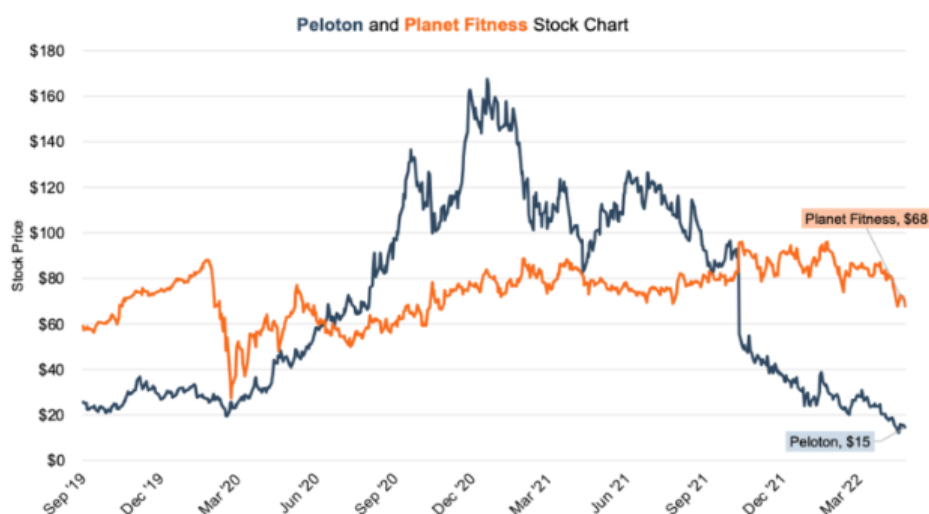

As mentioned earlier, Cashwalk is the only private company among the top five health and fitness downloads in South Korea in 2021, with approximately 16 million cumulative downloads, approximately 3 million daily active user (DAU), and 79 billion won in advertising sales during the pandemic in 2022. (Source: South Korea Electronics disclosure System). Considering that the total in-app sales of related services in South Korea are about 30 billion won, it is truly a tremendous achievement, and Cashwalk has become a leader while pioneering the M2E (Move to Earn) market in South Korea.

The focus of the discussion, then, is on where the success factor of the cash work lies. The industry's general opinion is that it has overcome most of the weaknesses of general private company service apps. Cashwalk applied the concept of "reward for activities" that YouTube or Samsung Health could not do. In addition, instead of the concept of "exercise," the daily activity of "walking" was used as a medium of compensation to lower the barriers to entry for users.

After the cashwalk's huge success, the market rapidly changed to similar services focused on walking, but the services that followed did not perform as well as expected. This clearly shows the preoccupation effect and winner-take-all effect in the online market.

If so, we need to analyze the offline health and fitness market as follows to find out how the online health and fitness business should develop in the future and the answer to this question.

5) Offline Health & Fitness Market Status During Pandemic

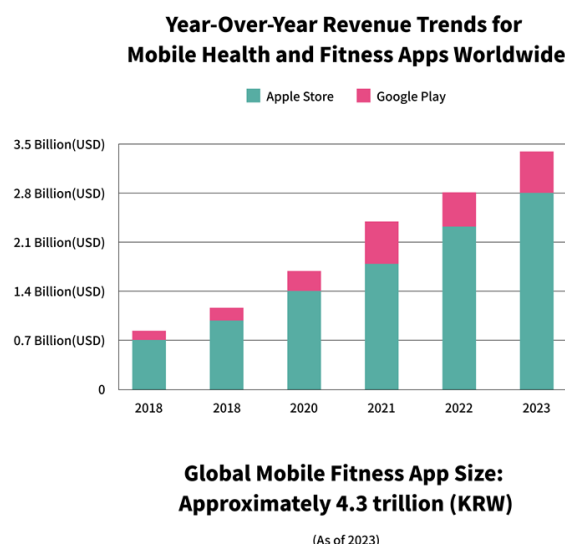

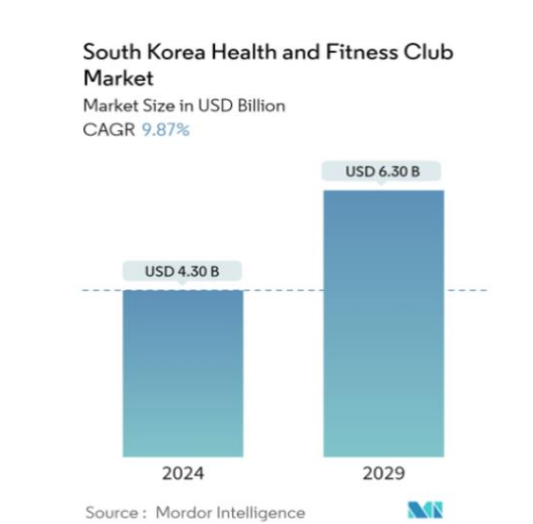

The chart above is a comparison chart of the stock prices of Peloton, the world's No. 1 online fitness company, and Planet Fitness, the world's No. 1 offline fitness company. In early 2020, when the pandemic

began, shares of Planet Fitness plunged, while Peloton's stock began rising from \$20 and soared to \$170 in December 2020. Since then, in March 2022, when the pandemic is expected to end, shares of Planet Fitness have recovered to pre-pandemic levels, while Peloton has plunged more than 10 times from its peak.

Stock prices are indicators that reflect a company's profitability and future prospects, and the changes in the stock prices of these two items more or less firmly demonstrate the fall of the online fitness market and the resurgence of offline fitness.

Next, we will look at the current status of the offline health and fitness market in South Korea.

6) Current offline health and fitness market in South Korea

Source: Sensor Tower.2023

As of 2024, the offline health & fitness facility market in South Korea is approximately 6trillion (see figure on the left), which is much larger than the combined global mobile market revenue related to health and fitness (see figure on the right).

7) Business direction of JUMONEY Project

As I mentioned earlier, through the Cashwalk case, the direction of the online health and fitness service in the future can be found through the analysis of the offline market. The conclusion is that we should conduct our business with the direction and goal of providing offline services because online is still a market with limited opportunities and offline is still an attractive large market.

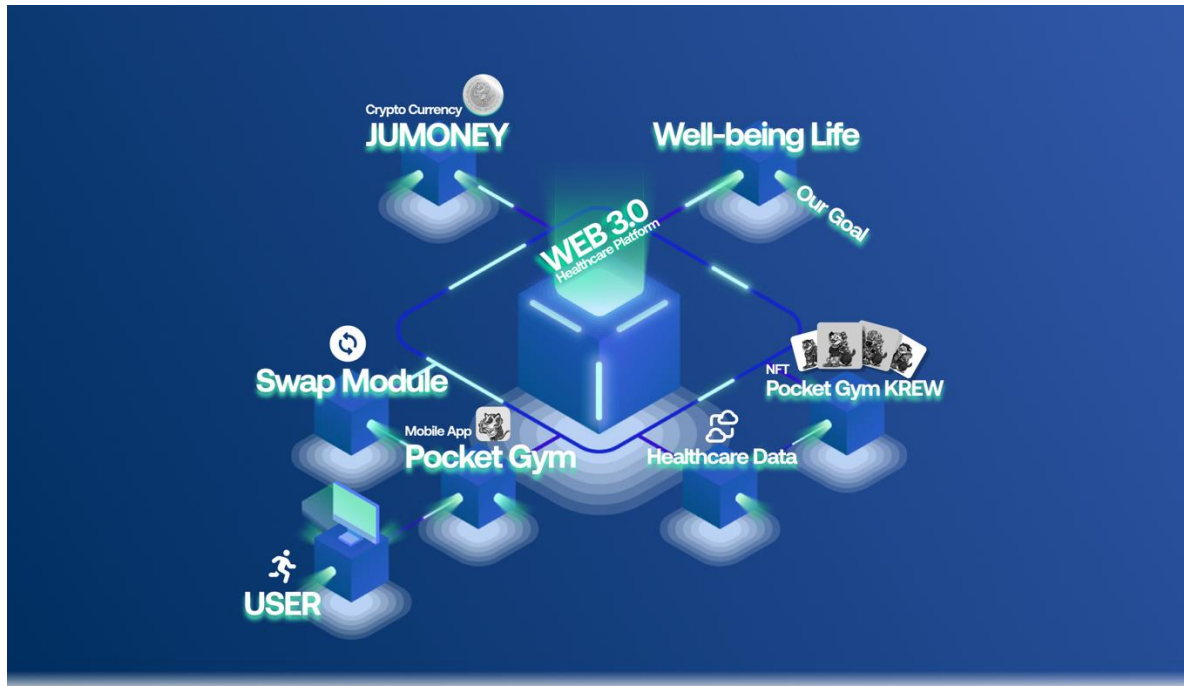

The strategy for future direction can be summarized as follows.

- The online service is conducted as a M2E (Move to Earn) service with proven recruitment of as many users as possible.
- We develop a service that can reward all wellness activities that can be done in everyday life as well as simple walking.
- We develop and provides users with practical and attractive offline compensation uses.
- We develop and provide digital assets for global use of NFT purchases or rewards.

- e) Satisfying use of rewards motivates users to continue participating in online services.
- f) Therefore, in the end, JUMONEY ecosystem participants seek and maintain physical and mental health in the well-being virtuous cycle.

2. Project Structure

1) Overview of Pocket Gym and Ecosystem

Pocket Gym is a WEB3.0 wellness life-forming platform that combines blockchain technologies and healthcare services. Users can individually perform their desired exercise online anytime, anywhere through the Pocket Gym app.

The Pocket Gym ecosystem rewards tokens for users' healthcare activities based on app activities and incentive structures to maximize users' voluntary participation. The rewards earned online can be used for well-being services again in offline real life, so it can be called an online and offline complex healthcare ecosystem.

2) Ecosystem Info

a) Token

- JUMONEY : Rewards & Utility Token

b) Applications

- Pocket Gym : Quest-to-Earn(Q2E) Service Application

- PocketGym Move : Move-to-Earn(M2E) Service Application

c) Offline Service

- Happy Health Day : Healthcare Complex Facility

d) NFT

- Pocket Gym KREW : Premium Membership of PocketGym Move & Records Healthcare data

3. Token

1) Overview of Token

The native cryptographically-secure fungible protocol token of Pocket Gym (JUMONEY) is a transferable representation of attributed utility functions specified in the protocol/code of Pocket Gym, and which is designed to be used solely as an interoperable utility token thereon.

a) Name : **Jumoney**

b) Ticker : **JUM**

c) Network : **KAIA(formerly Klaytn)**

d) Type : **Utility & Reward**

e) Contract Address : [0x3eef2b8d8050197e409b69f09462f49cab562979](#)

f) Total Supply : **5,000,000,000**

2) Explanations of Token & Utility

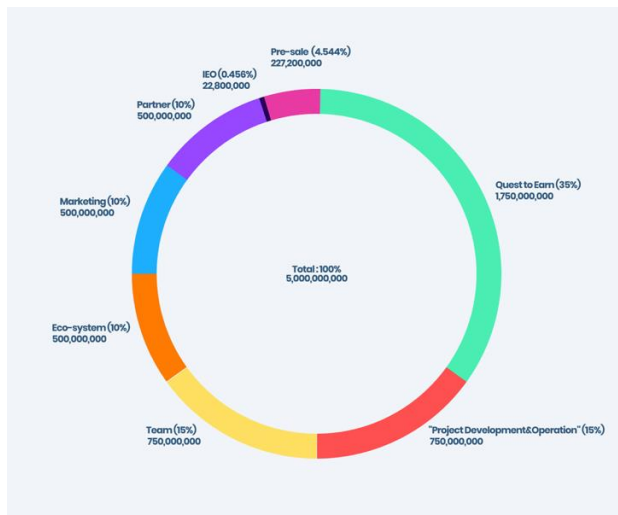

JUMONEY is a functional multi-utility token which will be used as the medium of exchange between participants on Pocket Gym in a decentralised manner. The goal of introducing JUMONEY is to provide a convenient and secure mode of payment and settlement between participants who interact within the ecosystem on Pocket Gym without any intermediaries such as centralised third party entity/institution/credit. It is not, and not intended to be, a medium of exchange accepted by the public (or a section of the public) as payment for goods or services or for the discharge of a debt; nor is it designed or intended to be used by any person as payment for any goods or services whatsoever that are not exclusively provided by the issuer. JUMONEY does not in any way represent any shareholding, ownership, participation, right, title, or interest in the Company, the Distributor, their respective affiliates, or any other company, enterprise or undertaking, nor will JUMONEY entitle token holders to any promise of fees, dividends, revenue, profits or investment returns, and are not intended to constitute securities in Hong Kong, Singapore or any relevant jurisdiction. JUMONEY may only be utilised on Pocket Gym, and ownership of the same carries no rights, express or implied, other than the right to use JUMONEY as a means to enable usage of and interaction within Pocket Gym. The secondary market pricing of JUMONEY is not dependent on the effort of the JUMONEY team, and there is no token functionality or scheme designed to control or manipulate such secondary pricing.

For the avoidance of doubt, neither the Company nor the Distributor deals in, or is in the business of buying or selling any virtual asset or digital payment token (including JUMONEY). Any sale or distribution of tokens would be performed during a restricted initial period solely for the purpose of obtaining project development funds, raising market/brand awareness, as well as community building and social engagement; this is not conducted with any element of repetitiveness or regularity which would constitute a business.

JUMONEY also provides the economic incentives which will be distributed to encourage users to exert efforts towards contribution and participation in the ecosystem on Pocket Gym, thereby creating a mutually beneficial system where every participant is fairly compensated for its efforts. JUMONEY is an integral and indispensable part of Pocket Gym, because without JUMONEY, there would be no incentive for users to expend resources to participate in activities or provide services for the benefit of the entire ecosystem on Pocket Gym. Given that additional JUMONEY will be awarded to a user based only on its actual usage, activity and efforts made on Pocket Gym and/or proportionate to the frequency and volume of transactions, users of Pocket Gym and/or holders of JUMONEY which did not actively participate will not receive any JUMONEY incentives.

3) Allocation & Distribution

a) Allocation

b) Distribution

Category	Volume	Distribution Schedule
Quest to Earn	1,750,000,000(35%)	72 months vesting
Project development & Operation	750,000,000(15%)	5% at TGE, 24 months vesting
Team	750,000,000(15%)	12 months lock up, 24 months vesting
Ecosystem	500,000,000(10%)	60 months vesting
Marketing	500,000,000(10%)	5% at TGE, 36 months vesting
Partner	500,000,000(10%)	12 months lock-up, 24 months vesting
Pre-sale	227,200,000(4.544%)	10% at TGE, 12 months lock-up, 24 months vesting
IEO	22,800,000(0.456%)	unlock
Total	5,000,000,000	

The above distribution schedule was designed by referring to the allocation and distribution schedule of previously successful M2E projects (Stepn, Superwalk, etc.), and the company conducted distribution or lock-up over a long period of time for the continuity of the project and the protection of investors.

II. Tokenomics

1. Actions of actors increasing or decreasing the Token economy

1) Action to Increase the Token Economy

Users can purchase membership having additional reward function when engaging in app activities with tokens. They can also purchase NFT that can participate in Hyper-mode on PocketGym MOVE as token, and they can also purchase token to use offline direct and affiliate services for 20-30% cheaper prices. Furthermore, they can also purchase tokens for investment purposes in anticipation of future growth potential of JUMONEY project.

2) Action to decrease the Token Economy

Regardless of the token's market price, the token economy will be reduced by selling rewards obtained from the ecosystem immediately on the exchange, spreading false information to communities or communication channels to buy tokens at a low price, or disturbing activities within the exchange for speculative purposes.

2. Compensation source, Incineration function, and Supply-demand balance model enabling Token

Economy

1) The Source of Compensation

Advertising revenue, membership sales revenue, NFT sales revenue to participate in Hyper-mode, and cash income earned in exchange for point-to-token swaps from operators will all be used to finance rewards within the Pocket Gym ecosystem.

2) Token Incineration Function

The difference between the actual sales price and the actual supply price, point use for fail the quest, a fee for point-token swaps, and using direct or affiliated services, the token is incinerated.

3) Demand-Supply Balance Model

III. Technology and Security

1. Standard of Token

With KIP-7, a fungible token standard, it allows standard API implementation for tokens in smart contracts.

2. Blockchain Mainnet

KAIA(Cypress).

3. Compatibility

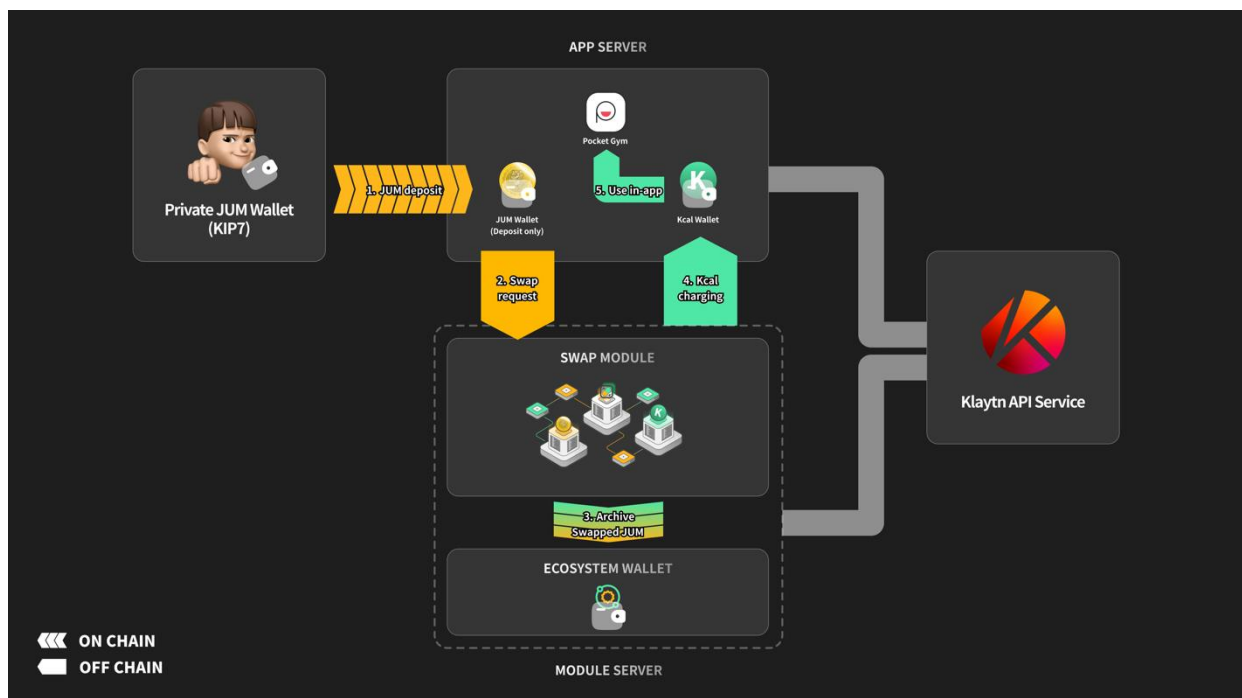

The standard interface allows to reuse all tokens in KAIA in other applications, from wallets to decentralized exchanges.

4. Swap Module for Utility

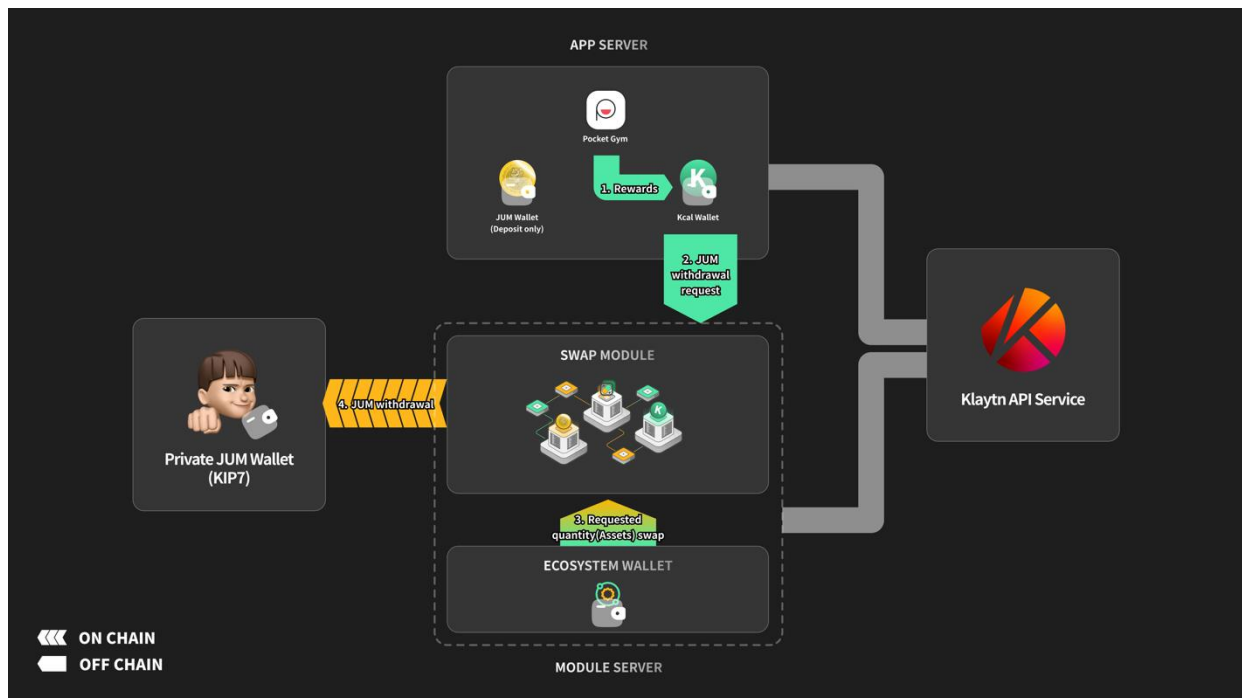

1) Overview of Swap Module

It is almost impossible to purchase services or products with tokens in real life. Therefore, we developed a token-point swap module so that users can use the tokens earned as rewards in accordance with the purpose of the project in real life. This module is designed to expand the usage of tokens, and supports swaps between tokens and points (Kcal) in the Pocket Gym app. Through this swap module, users can turn tokens into points and use them for app activities, and use various offline services through point malls.

<Token→ Point>

<Point → Token>

2) Protocol Type : KCT(KIP7)

3) Key Technology : Token + Point Linked Q2E(Quest to Earn) Ecosystem Build

a) Kaia network Token Issuance

- Leveraging Solidity 0.8.0 version of source code
- Mainnet : Cypress
- Interworking with Klaytn Api Service

b) Building a point ecosystem inside Pocket Gym app

- Reward point paid ecosystem when wellbeing Quest is achieved
- Points are fixed to cash value

c) Development of in-app swap modules using Klaytn Api Service

- Wallet Interworking in App
- Interworking with in-app swap capabilities

d) Ensures token scalability by working with point

- Point Mall
- Wellbeing Affiliates (fitness facilities, F&B companies, etc.)

5. Wallet

The wallet installed in the Pocket Gym service is implemented through the wallet API of KAS (Klaytn API Service).

Wallet API helps developers to create and manage Kaia accounts and send transactions. It provides a wallet for secure storage of your Kaia account private keys as well. The functionality of the multiple endpoints enables you to do the following actions.

1) Manage Accounts

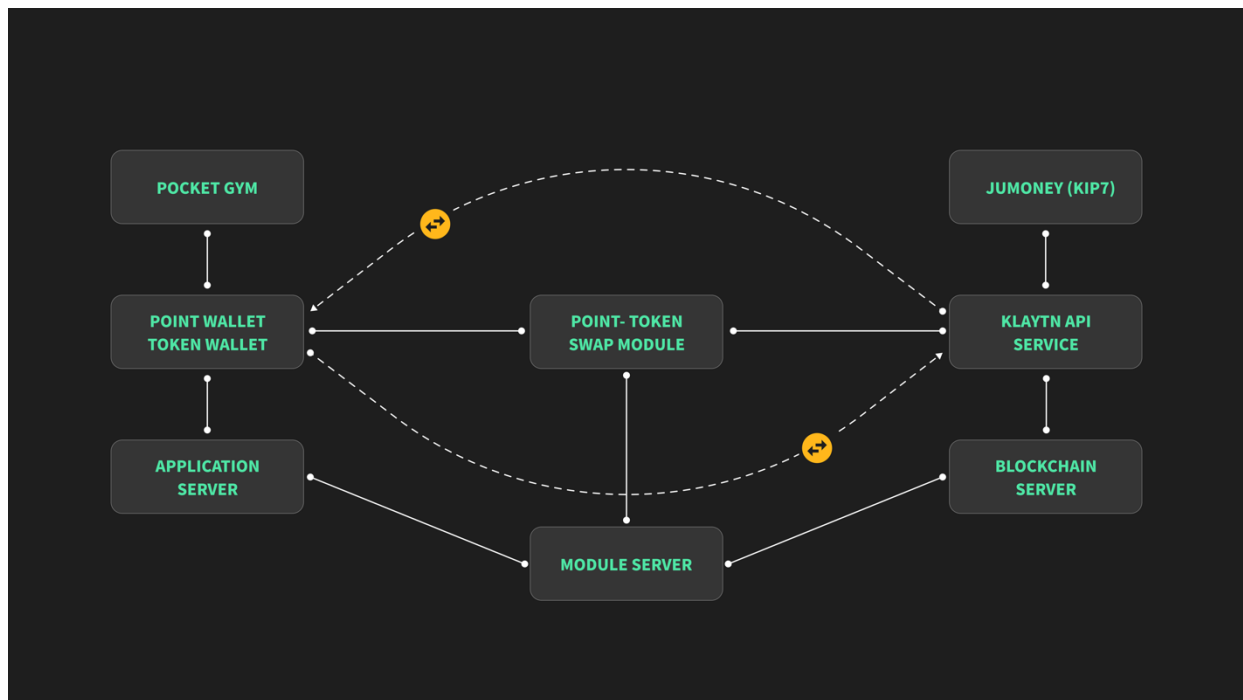

- Create, retrieve and delete Kaia accounts
- Update Kaia accounts to multisig accounts, role-based accounts, etc.
- Manage private keys of all accounts registered on the account pools
- Manage account pools

2) Create and Send Transactions

- Basic transaction
- Fee delegation transaction
 - ✓ Global fee delegation transaction
 - ✓ User fee delegation transaction
- Multisig transaction
- RLP-encoded transaction

6. Server

The servers that make up the ecosystem are divided into applications, swap modules, and blockchain servers.

7. Audit System

Smart contract audit was completed through an external blockchain security audit agency, SlowMist. The inspection items and results are shown in the table below.

NO.	Audit Items	Result
1	Replay Vulnerability	Passed
2	Denial of Service Vulnerability	Passed
3	Race Conditions Vulnerability	Passed
4	Authority Control Vulnerability Audit	Passed
5	Integer Overflow and Underflow Vulnerability	Passed
6	Gas Optimization Audit	Passed
7	Design Logic Audit	Passed
8	Uninitialized Storage Pointers Vulnerability	Passed
9	Arithmetic Accuracy Deviation Vulnerability	Passed
10	"False top-up" Vulnerability	Passed
11	Malicious Event Log Audit	Passed
12	Scoping and Declarations Audit	Passed
13	Safety Design Audit	Passed
14	Non-privacy/Non-dark Coin Audit	Passed

8. Smart Contract

Smart Contract Address : [0x3eef2b8d8050197e409b69f09462f49eab562979](#)

9. External Security Audit and Vulnerability Audit

1) Information of Audit Institution

SlowMist is a blockchain security firm established in January 2018(<https://www.slowmist.com>). The firm was started by a team with over ten years of network security experience to become a global force. Our goal is to make the blockchain ecosystem as secure as possible for everyone. We are now a renowned international blockchain security firm that has worked on various well-known projects such as HashKey Exchange, OSL, MEEEX, BGE, BTCBOX, Bitget, BHEX.SG, OKX, Binance, HTX, Amber Group, Crypto.com, etc.

SlowMist offers a variety of services that include but are not limited to security audits, threat information, defense deployment, security consultants, and other security-related services. We also offer AML (Anti-money laundering) software, MistEye (Security Monitoring) , SlowMist Hacked (Crypto hack archives),

FireWall.x (Smart contract firewall) and other SaaS products.

2) Audit Report

<https://drive.google.com/file/d/1JgucqKg5hVmWkU96uJlkwM3e1ll6gT6s/view?usp=sharing>

3) Need for Re-inspection and Additional Inspection

Smart contracts and blockchain technology have been audited by SlowMist, and smart contracts are unchanged, so if a technology defect is found or a change is not inevitable, a re-inspection is not required. We do not currently have any additional issuance plans, so we believe that re-inspection, additional inspection, or regular inspection is not necessary.

10. Detection and Monitoring Systems, Technical Support

JUMONEY operates on the basis of Kaia Mainnet (formerly Klaytn), and all on-chain transactions of the token can be verified through KaiaScope, a blockchain explorer. Blockchain records are immutable and transparent in nature, so they cannot be manipulated or deleted, and abnormal transactions can be monitored. In addition, we are monitored in real time by our internal personnel and are prepared for accidents. Detection and response monitoring systems are in progress regularly and ensure continuous technical support even after listing.

The reward payment system in the ecosystem is also recorded on-chain based on the API, so all sources can be tracked, and the reward is based on a system that is paid only when the quest is achieved, so there is no possibility of abnormal token leakage.

In addition, about 88% of JUMONEY tokens are custodied to KODA, preventing mass leakage. All the supplies of the foundation outside of KODA are also stored through KAS (Klaytn API Service), so the risk of hacking is very low.

11. Security Measures of Withdrawal Delays and Errors

1) Withdrawal Delays

If the token withdrawal in the app is delayed due to a temporary server error or the slowness of the blockchain itself, it will be notified through the official account and normalized through immediate server inspection to ensure that users' withdrawal is carried out normally.

2) Security Measures

a) Response to Major Security Threats such as DDoS, Hacking, and Privacy Violations

- Specify IP Whitelist when accessing Blockchain Server
- 2FA Settings on Access to API Management Account (OTP)

b) Process for Responding to Security Incidents Related to Token Leakage

- Freeze all transactions by enabling the 'Pause' feature within Contract
- Request suspension of transactions after delivering accident details to token listed exchange representatives
- Collect accident-related transactions and receive reports to police and related agencies
- Announcement on the Foundation's official disclosure site
- Provide compensation to investors affected by the accident

IV. Disclosure and Communities

1. Discord

We are currently updating our token and service disclosures within Discord and we have a customer center operating 365 days a year. We have also prepared a chat area for our users' communities.

<https://discord.com/invite/QY3TcY6BVD>

2. Communities

We are currently uploading project-related posts every day through X (Twitter) and Telegram and show that the project is continuously running. We also upload home training-based fitness content that we have produced ourselves through YouTube to help users conduct home training in their daily lives.

X(Twitter) : https://twitter.com/Pocket_Gym_KREW

Telegram : https://t.me/Pocket_Gym

Youtube : <https://www.youtube.com/@pocketgym>

[Info of the Issuing Company]

I. Overview

1. Summary of the Company

The issuing company of JUMONEY TOKEN is FITQUEST Ltd., established on April 7, 2022, and its headquarters is located in Kowloon, Hong Kong.

The CEO is Yoon Sung, who owns 100 percent of the issuer's shares. Yoon Sung currently resides in Siheung, Gyeonggi Province, South Korea and performs all of our duties in South Korea. The homepage address is www.jumoney.xyz.

2. Contents of Business

1) Contents of Issuing Company

The issuing company designs and manages the token ecosystem, which is to issue, supply, and distribute token, determine the distribution ratio and schedule, lock-up policies, and governance.

2) Relationship between Issuing company and Service operation company

Issuing company entrusts the service operating company with the duties related to the token, and the service operating company provides the issuing company with services necessary for the construction and management of the token ecosystem, platform and application development and operation, token management (including technical management), token listing on globally recognized Crypto exchange, securing the utility and usability of token, marketing and business development, attracting ecosystem participants, community management, disclosure and regulatory response, performing the role of a delivery agent for the issuer in the event of a dispute at the token listing site, obtaining legal advice and other expert advice, operating the point token swap module, and other token ecosystem operations. The issuing company pays the service operating company a fee in exchange for such services.

[Info of the Service Operating Company]

I. Overview

1. Summary of the Company

The service operating company for the JUMONEY project is Wave heal Co.Ltd., which was established on November 28, 2023, and was certified as a venture company on January 15, 2025. The headquarters is located in 42 East lagoon, Turtle Island Dulle-gil, Siheung-city, Gyeonggi-do, and the branch office is located in 42 West lagoon, Turtle Island Dulle-gil, Siheung-city, Gyeonggi-do.

The current business is largely divided into online and offline businesses.

First of all, we are developing and operating two applications, PocketGym and PocketGym MOVE, in the field of online business and application software development and supply, and the relevant website is www.pocket-gym.net. We are providing fitness contents and wearable interworking services to Samsung Electronics (Samsung Health) in the content solution field, and you can experience our contents anytime through the Samsung Health app service on Samsung Galaxy phone. The relevant website is www.pocketgymevents.com.

In the offline business field, “Happy Health Day” is operated in the arts and sports service industry, education service industry, sports education institution, youth training facility operation, and food and beverage-oriented retail business. In the living accommodation facility operation field, 15 caravans are operated, and the related website address is www.happyhealthday.life.

The CEO of Wave heal Co. Ltd is Yoon Sung, the largest shareholder of the service operating company, and owns 50% of the shares.

2. Major history of the Company

2023-11 Establishment of “Wave heal Co., Ltd”

2023-12 "Wave Park", East Lagoon Operating Agreement and West Lagoon Operating and Development Agreement

2024-07 HappyHealthDay branch established and well-being complex facilities completed.

2024-07 "Siheung City", Turtle Island Public Tourism Council Business Agreement

2024-08 “Samsung Health”, Completion of all cooperation contracts

2024-10 Completion of trademark registration for 3 cases other than "Pocket Gym”

2024-10 “Body channel”, Business Agreement With 55 Fitness Chains Nationwide

2024-11 “Wave park”, Business Agreement for Surfer's Fitness Program develop.

2024-12 "Handys", Business agreement for 410 hotel room use

2025-01 “Siheung City Tour”, Business agreement

2025-01 “Korea Tourism Organization”, Business agreement on MICE-specific program

2025-01 Acquisition of Venture Business Certification

2025-02 “Weebur”, Business agreement with Korea's largest workshop platform company

2025-02 “Sihwa Hospital”, Business agreement with Siheung-city's only general hospital

3. Changes in Capital Stock

The capital stock at the time of the company's establishment is KRW 1,000,000, and there has been no change in the capital stock since the company's establishment. However, we plan to increase capital within March 2025.

4. The Total Number of Shares

The total number of shares already issued is 2,000. There is a capital increase plan within March 2025, and the total number of shares will increase based on the face value of KRW 500.

5. Matters concerning the Article of Incorporation

1) Last revision Date and change History

The company has prepared the articles of incorporation at the time of the company's establishment on November 28, 2023, and has remained unchanged until now.

2) Status of Business Purpose

The target business registered by the company on the corporate register are as follows.

Sortation	Purpose business	Operation Status
1	Application software development and supply business, e-commerce retail, other general and living accommodation business, other sports educational institutions, content solution development business, food and beverage-oriented comprehensive retail, youth training facility operation, sports equipment business, and any other business incidental to each subparagraph	Operating
2	Arts/sports and leisure-related services, general product wholesale, campsite operations, advertising agency, advertising production, advertising services, Online advertising agency, sports facility consulting, sports equipment rental, Sports facility operation, sports facility development, operation advisory, sports facility manpower dispatch, sports facility manpower training, sports facility trading brokerage, sports facility indoor device, product brokerage software development, multimedia solution business, real estate trading, real estate rental and sublease, trade related to each subparagraph (export and import), e-commerce, telecommunications sales	Non-operating

From 2025, we plan to additionally operate advertising production, advertising agency, sports facility development, operation advisory, sports facility personnel dispatch, and sports facility personnel training.

II. Contents of Business

1. Offline Business

1) Overview

a) Summary

Turtle Island, where the company operates a business, is an emerging market that has only been in development for three years and is still actively developing. Companies in the Turtle Island area are closely related to the operation of Wave Park, and sometimes have an independent business area apart from the operation of Wave Park.

We are considered one of the companies that has secured an independent business area.

The company established a corporation on November 28, 2023, and began operating in January 2024. In the first half of 2024, which was the preparation period for major businesses, it generated about 160 million KRW in sales, but in the second half of the year, when it started its purpose business weakly, it recorded about 290 million won in sales, up 75% from the first half. This is also proof that its own sales activities focusing on wellness tourism, wellness events (workshop/convention/MICE, etc.), experiential wellness content, and wellness food have begun to work effectively in the market.

b) Business Outlook

① The start of a full-fledged business

The main reason why the project is more expected in the future is that the project, which has been preparing with partners since 2024, will be realized in earnest from 2025. Sales in 2025 are expected to be KRW 1.4 billion, up about 210 percent from 2024, and the "Running contents " project will begin in March 2025 in collaborating with Siheung City Tourism Division, Siheung City Sports Promotion Agency, Samsung Electronics (Samsung Health).

And the project to operate the current Turtle Island as "Samsung Health Island" has also been Kick Off.

② Selected for Experiential MICE Program, Korea Tourism Organization

"Exergame4D" operated by our company has been selected for the Korea Tourism Organization's experiential MICE program. This program provides users with about 80% of the program's usage fees, and it is expected to contribute to our sales in the future as well as have a great impact on marketing.

③ Business agreement with 'Siheung City Tour'

The "Siheung City Tour" bus will depart from Sadang Station, a transportation hub in Seoul, once every morning and afternoon, and will be operated in the form of a vertical trip (visiting several designated destinations). Although the transportation infrastructure is not yet developed in the Turtle Island area compared to other areas, the "Siheung City Tour" is expected to play a big role in our business.

In February 2025, the Turtle Island Landscape Bridge will be completed, and in April of the same year, the Coastal Cloud Bridge will be completed. The company will operate contents such as 'Burning Kcal to Walk and Exercise' and 'Wellness 1-Day Tour' from April 2025. City tour has agreed to collaborate with the programs operated by us more than 50% of the tourism programs.

④ Exclusive agreement with 'Weebur'

Company 'Weebur' has conducted workshops with about 4,000 companies and is the largest corporate workshop platform in South Korea, directly collaborating with more than 700 human resources

departments of medium-sized companies. In recognition of its outstanding facilities, program originality, and program diversity, we were offered the exclusive right to operate corporate workshops by Weaver, and signed a contract to set a minimum order quality (MOQ) on that condition. As a result, we can not only secure stable sources of sales but also expect explosive demand for workshops.

⑤ Business agreement with ‘Sihwa General Hospital’

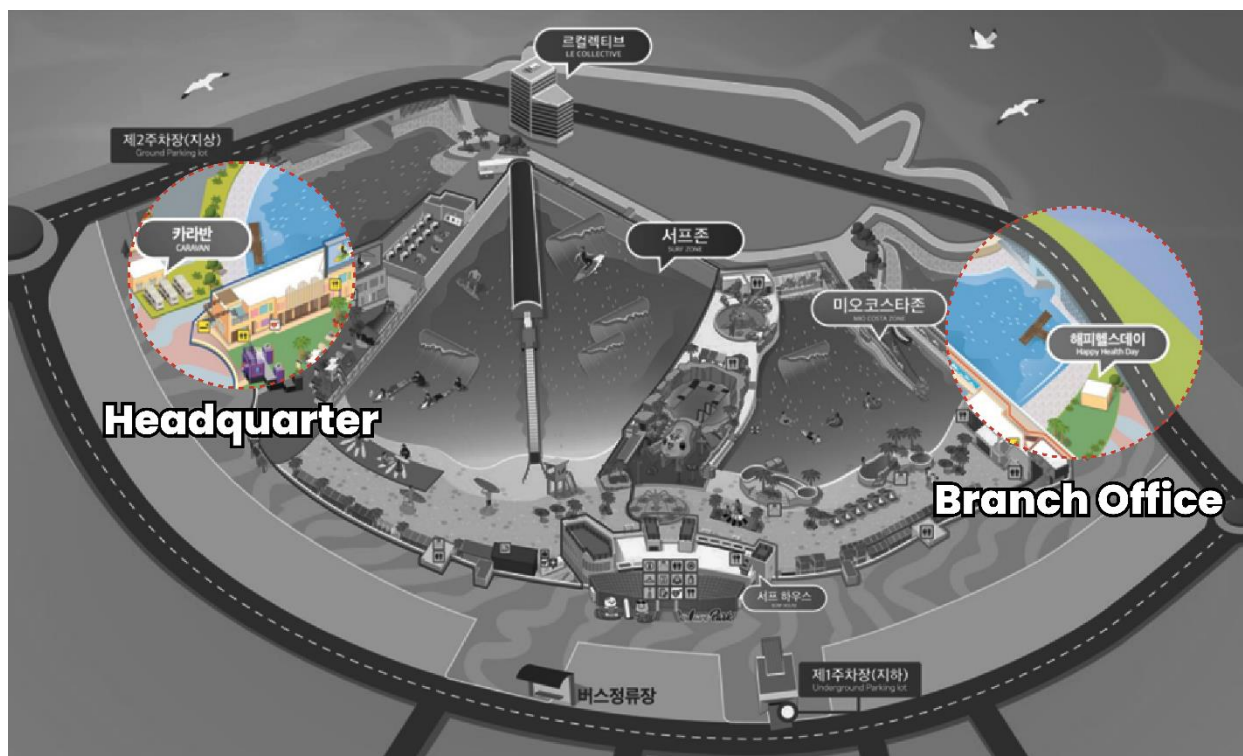

Sihwa Hospital is the only general hospital in Siheung, which is used by about 500,000 people living in Siheung City, and the floating population of Ansan City, Sihwa Industrial Complex, and Ansan Industrial Complex, which are adjacent to Siheung City, is expected to be much larger.

Although the details of the project have been under discussion since the agreement, the project to use our wellness facility as a wellness facility attached to Sihwa Hospital seems promising, and in that case, patients at Sihwa Hospital will be provided with services such as 'exercise', 'rehabilitation', 'diet camp', 'detox camp', and 'mobile health habit formation'.

In addition, Sihwa Hospital's "Health Examination" is in the product category at our point mall, and users who use our service can even use medical services using compensation points or JUMONEY tokens.

2) Offline Services and Facilities

a) Bird's Eye view of the Entire Facility

b) Physical Experience Type

Exergame 4D Graphic Fitness

Beginners, is there no way to exercise happily?

If you feel burdened by exercising, if you find a fun and new way of exercising, AI-based graphic fitness that adds fun to modern "fitness."

ExerGame4D is the most suitable program.

Victor Route

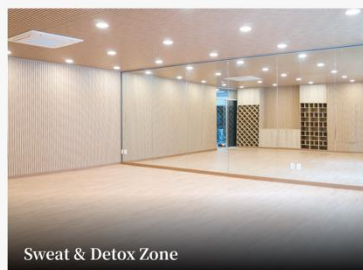

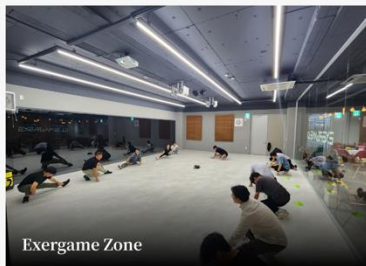

Explosive training with a mix of aerobic & muscular exercises to burn up to 1,000 Kcal

It is an indoor & outdoor total fitness program with the advantages of overseas programs such as Crossfit and F45 and Korean exercise elements.

Breathing & Relax [氣, 休]

Yoga & Meditation

It is a program specially organized to strengthen the body's immune system and remove toxins in an environment with facilities optimized for metabolic activation, such as floor heating, warmers, and humidifiers.

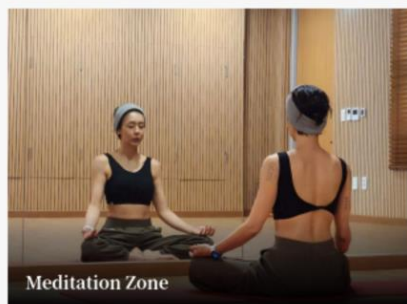

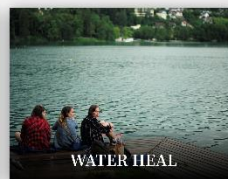

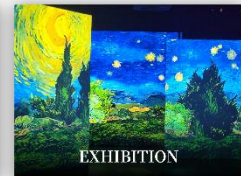

c) Mental Experience Type

Soul Fill

"For the body and heart that have become heavy in everyday life."

Daily, we build toxins in our bodies and minds through many types of stress. We have prepared programs that allow you to heal your tired mind and body by "Emptying and Filling" from stress, human relationships, and irregular lifestyles.

d) F&B experience Type

Service - I

K BBQ

While Korean food is in the spotlight overseas due to the craze for K-culture, you can taste the peak of K-food through the K-BBQ service, which serves pork belly, kimchi, ramen, soybean paste stew, and various ssam(vegetables).

It takes place in the outdoor barbecue zone of the caravan.

Service - II

Picnic BBQ

You will enjoy the BBQ service in beautiful lakes and flower fields. Whole chicken and whole pork belly will be served without oil because of the powerful electric grills, preserving both health and taste.

It takes place in West Lagoon on Happy Health Day.

e) Accommodation

<Direct operating place>

Accommodation - I

“

Nature Friendly Stay

The caravan combines the atmosphere of Turtle Island and the lake, offering the sensibility of a resort.

On this peaceful walkway, make unforgettable memories while admiring the beautiful setting sun on the West Sea of South Korea.

<Affiliate place>

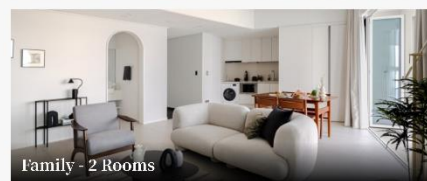

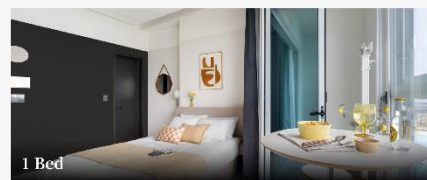

Accommodation - II

“

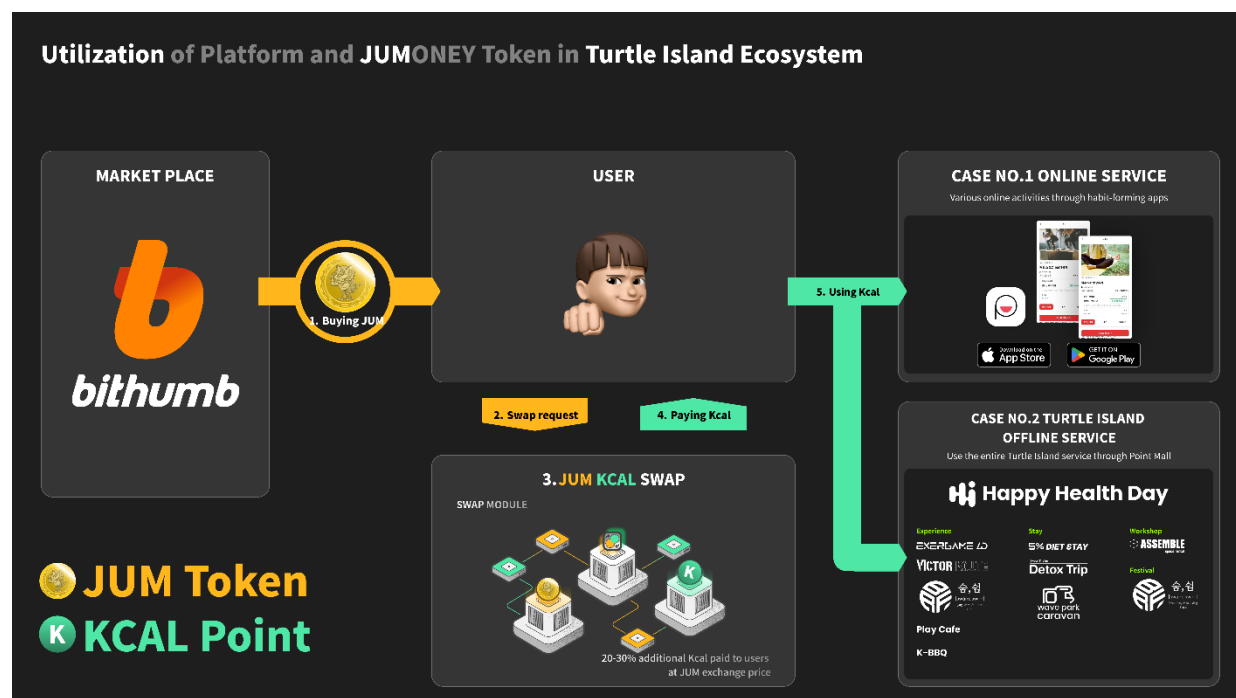

Modern Stay

You can stay comfortably in Le Collective, a high quality level resort hotel with Sihwa Lake and Wavepark overlooking at a glance.

There are also various types of rooms, so you can choose the room you want.

3) Utilization of Platform and JUMONEY Token in Turtle Island Ecosystem

When a user requests a swap through the swap module in Pocket Gym after purchasing the JUMONEY token from the crypto exchange, the user receives the Kcal, which is the point. And users can use Kcal in the Turtle Island ecosystem to use the service.

2. Online Business & Services

1) Pocket Gym

a) Overview

Pocket Gym is a Quest-to-Earn (Q2E) service APP that allows users to earn rewards through well-being quests such as lifestyle, eating habits, and mental care as well as walking with the aim of "A world where everyone earns money with habits."

A platform as a service designed to enable users to operate within the project ecosystem, helping them form health habits and achieve individual fitness goals through a variety of quests. The reward system maximizes user engagement by providing short-term, step-by-step, and continuous motivation.

In addition, the Pocket Gym platform can provide fast and effective services to users in about 190 countries around the world through joint partnerships with Samsung Electronics' global fitness platform Samsung Health. Quest is provided in the Pocket Gym by linking various health data such as walking, heart rate, and sleep of "Samsung Health."

Google Playstore:

https://play.google.com/store/apps/details?id=com.squatt.pock_gym

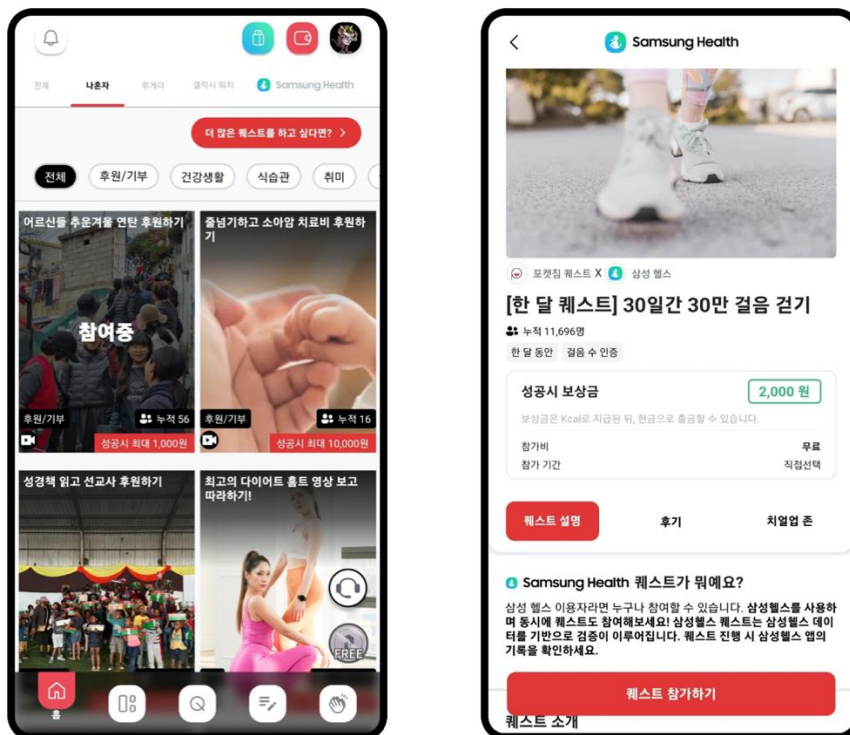

Apple Appstore:

<https://apps.apple.com/cg/app/%ED%8F%AC%EC%BC%93%EC%A7%90-%EB%8F%88%EB%B2%84%EB%8A%94-%EC%8A%B5%EA%B4%80-%EA%B1%B4%EA%B0%95-%EC%9A%B4%EB%8F%99-%EC%95%B1%ED%85%8C%ED%81%AC/id1597614711>

b) Quest

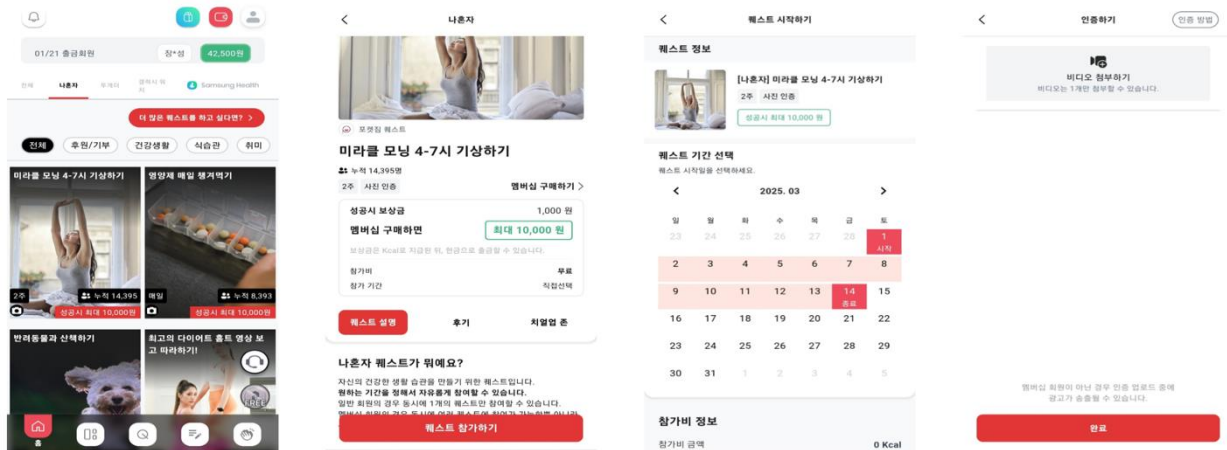

Rewards are paid when you achieve a quest for the formation of a well-being life. The quest is composed of various exercises such as walking, as well as daily habits, nutrition, and mental care, so men and women of all ages can participate.

The project team developed a customized quest algorithm using solution-based data to achieve the user's goals and design the appropriate level of difficulty. Four variables are applied: the user's exercise experience, personality, motivating elements, and gender, providing the optimal quest for each user to prefer.

The types of quests consist of four types: i) "Solo Quest," which allows users to participate in the quest they want anytime, anywhere individually, ii) "Together Quest," which allows users to motivate and compete with each other, iii) "Samsung Health Quest," which participates based on the number of steps of Samsung Health, wearable data (heart rate, sleep record, body composition), iv), "Affiliate Quest", which is conducted in partnership with companies in well-being industries such as healthcare/F&B companies, exercise facilities, and SPA.

c) How to Use

<Quest selection → Specify duration of participation → Photo/Video authentication → Rewards paid upon achievement>

d) Key Features

- ① Swap Module: A module designed to expand the usage of tokens and supports swaps between tokens and points in the app (Kcal).
- ② Wallet function: It supports KIP-7 wallet function based on KAS(Klaytn API Service) to support token deposit and withdrawal.
- ③ Verification function: There are four types of authentication of quests in the app: taking pictures, taking videos, fetching albums, and linking Samsung Health data. The user's certification is uploaded to the Admin page for the inspection process, and when the inspection passes, a reward will be paid. In the case of Samsung Health Data Interworking Quest, if the health data is achieved by the target value for a specific period of time set for each quest, the inspection will be automatically performed. ex) walking 300,000 steps for one month

2) PocketGym MOVE(Global)

a) Overview

With a low-difficulty M2E (Move-to-Earn) service app that allows users to mine "JUMONEY" simply by walking, it has drastically lowered entry barriers for forming wellness habits. Users who want to mine more rewards can join Hyper Mode by purchasing NFTs

What distinguishes from Pocket Gym is the blockchain ecosystem and NFT membership features. The rewards are paid directly as tokens, not points, and can be deposited and withdrawn on the exchange at any time. Of course, users can use at the point mall by sending tokens to the wallet on the Pocket Gym app.

In addition, we encourage global users to participate by supporting the Korean/English language as a service aimed at the global healthcare market including Korea

Google Playstore:

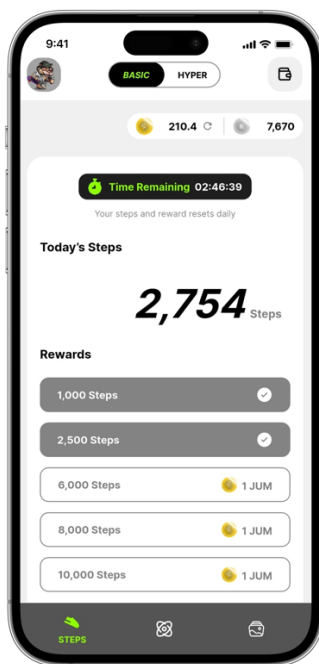

<https://play.google.com/store/apps/details?id=com.pocketgym.global&pli=1>

Apple Appstore:

<https://apps.apple.com/cg/app/pocketgym-move/id6473878570>

b) Move-to-Earn(M2E) : The Pedometer

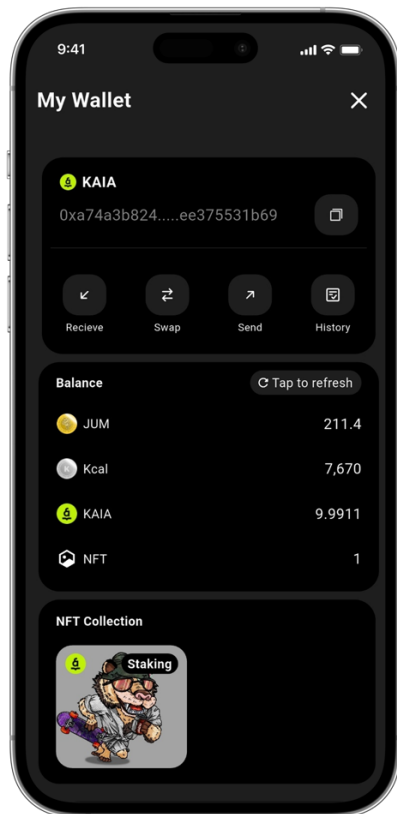

Users can mine tokens with just a simple walk in your daily life. Users can earn up to 10,000 steps a day and it will be renewed after one day. And get a JUM token reward based on the number of steps you take.

c) Wallet

It is equipped with a Kaia network-based wallet.

- JUM: Self-developed token based on Klaytn. Swapable to Kcal points.
- Kcal: As an in-app point, it will be used to charge NFT stamina.
- Kaia : Utilized for gas expenses.
- NFT: PocketGym KREW NFTs - Participate Membership of Hyper mode.

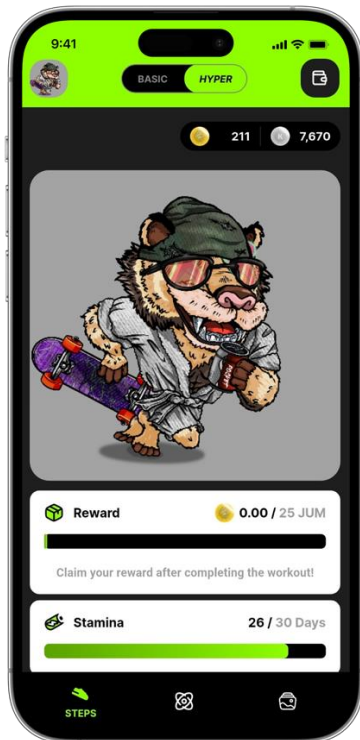

d) Social-fi: Referral System

Users can get JUM tokens if they themselves become a well-being guide for those around them. If you spread your positive influence through PocketGym MOVE and invite one other user to join, you will receive 10 JUM.

e) NFT-fi

With a special service unique to PocketGym MOVE, we have supported NFT features to grant premium membership rights, adding gaming and interesting elements of token mining.

- JUM token rewards
- Reward : Daily JUM compensation gauge (initialization based on 24 hours)
- Stamina : 1.) Decrease by minus 1 per day 2.) No reward when zero is reached
- 3.) Charge with Kcal

3) Point Mall

a) Overview

Users can use Kcal, a Pocket Gym app reward point, or purchase JUM on the exchange and switch to points through the in-app swap module to purchase items from affiliates at the point mall. It is the most important element in the well-being life virtuous cycle model of the Pocket Gym ecosystem and highlights the utility functions of the JUMONEY token.

b) Point Mall Affiliates

- ① Our Service: “Happy Health Day”
 - Contents: Caravan accommodation tickets, Group fitness program, Yoga festival tickets, etc.
- ② Fitness Center: Agreements have been signed with 70 centers nationwide of the “Body Channel”
 - Contents: Gym membership, PT tickets, etc.
- ③ Theme Park: Agreements have been signed with Wave Park
 - Contents: Surfing lesson tickets, water park tickets, etc.

In the future, we will continue to expand users' well-being use places by partnering with various healthcare companies to enter point malls, and through this, we will further expand the project ecosystem.

3. Revenue

(Unit: Million KRW)

Sortation	Previous Year	Projection for year 2025
-----------	---------------	--------------------------

Service	200	500
Workshop, Mice	100	400
Partner collaboration	150	350
Software/Contents Supply	-	150
Total	450	1,400

4. Estimated Order Amount²

(Unit: Million KRW)

Sortation	Company Name	Projection for year 2025
Client	Staymanagement	150
	Handys	100
	Samsung Electronic	100
	Weebur	200
	City Tour	100
	Sihwa Hospital	100
	KyungHee University	50
	Total	800

5. Risk Management and Derivative Transactions

Risks to this business may arise from sales falling to the point where the company cannot continue operating, or from sales falling below expectations. In response, the company is taking a strategy to share profits in cooperation with partners with expertise in each field to minimize risks caused by their own personnel or infrastructure in the business area. This focuses on minimizing risk rather than maximizing sales, and also has the advantage of accumulating our sales and marketing know-how through collaboration strategies. Based on these experiences, it is expected that opportunities to trade with other companies with similar business areas to those of our partners will expand in the future.

6. Major Contracts and R&D

1) Summary

The main contracts signed by the service operating company are (1) a contract for sales and (2) a contract for the storage and management of tokens. Among them, (1) a contract for sales is divided into (a) a contract for online services and (b) a contract for the turtle island ecosystem. (a) a contract for online services is a contract for linking sdk³ or attracting in-app usage rights, etc. in relation to a Pocket Gym app, or a service contract for developing and supplying software to a partner. (b) a contract for the turtle

² Please note that the actual results may differ in the future, although we tried to estimate the forecast based on the internal data of the service operating company in an objective and reasonable way as much as possible

³ SDK is a software development kit that is provided through partnerships between companies to facilitate development when linking app services from other companies.

island ecosystem is a contract for selling a service using the ecosystem within the turtle island or a contract for attracting services to that ecosystem.

2) Major Sales Sources and Revenues

The major sales sources and revenues of service operating companies over the past year are as follows

No.	Year 2024	
	Name of Company	Revenue (KRW)
1	Naver Pay	200,000,000
2	Staymanagement	50,000,000
3	Handys	10,000,000
Total		260,000,000

3) Main Contents of Major Contracts

a) Contracts related to online services

① Samsung Health SDK Interworking Contract

Counterparty	Date of conclusion	Contents
Samsung Electronics Co., Ltd.	2022. 10. 20.	A contract to open a quest in conjunction with the Samsung Health SDK in the Pocket Gym app (Providing and verifying quests using health data from Samsung Health and Galaxy Watch)

② Services Cooperation Contract

Counterparty	Date of conclusion	Contents
Samsung Electronics Co., Ltd.	2023. 3. 18.	Software Development Supply Services and Vendor Selection Contract
Ground X -Klaytn API Service	2022. 1. 21.	Development contract for wallet, swap module, etc. through blockchain API technology
Body Channel	2024. 9. 19.	Cooperation of products such as fitness center passes in Point mall and marketing cooperation Contract
Wavepark	2023. 7. 6.	Product partnership such as Wave Park Surfing Lesson Ticket in Point Mall marketing cooperation Contract

b) Contract related to “Turtle Island” Ecosystem

Counterparty	Date of conclusion	Contents
Wavepark	2023. 7. 6.	Joint Development Contract for MICE Program Promotion by the Korea Tourism Organization
Bon Davinci	2024. 8. 24.	Program joint development and marketing cooperation

		Contract
Handys	2024. 11. 4.	Accommodation (Lecollective, Urban Stay) Room Use and Barbecue Package Supply Contract

IV. Accounting preparation and audit

1. Matters concerning accounting preparation

The accounting of the issuing company and service operating company is prepared in accordance with the relevant laws and regulations.

Currently, no clear decision has been made on which of the international accounting standards, Hong Kong accounting standards, or Korean accounting standards will be applied.

Therefore, issuing company based in Hong Kong currently apply Hong Kong accounting standards, and service operating company based in South Korea apply South Korea accounting standards to settle accounts.

2. Audit of accounting

The issuing or service operating company is not subject to external audits as of the date of delivery of the white paper.

V. Matters concerning the institution of the company, such as the board of directors

1. Matters Concerning the Board of Directors

1) The board of directors of the issuing company

The issuing company has a total of one director as of the date of delivery of the white paper, and there is no separate board of directors.

2) The board of directors of the service operating company

The service operating company is a company with a capital of less than KRW 1 billion, and as of the date of delivery of the white paper, there are a total of two directors, and there is no separate board of directors.

2. Matters Concerning the Audit System

As of the date of delivery of the white paper, neither the issuing nor the service operating company has an auditor.

3. Matters Concerning the General Shareholders' Meeting, etc.

1) Current Status of Voting System for Service Operating Company

As of the date of delivery of the white paper, we are not adopting a concentrated voting system, a written voting system, and an electronic voting system.

2) Status of Voting Rights

(Unit: Stock)

Sortation	Type of Stock	Number of Stocks	Note
Total Number of Issued Stocks(A)	Ordinary Stock	2,000

VIII. Matters concerning affiliates, etc.

As of the date of delivery of the white paper, it is not applicable.

IX. Details of transactions with major shareholders

As of the date of delivery of the white paper, it is not applicable.

X. Legal Policies and Internal Controls

1. Matters Related to the Act on the Protection of Virtual Asset Users (hereinafter referred to as the “Virtual Asset Protection Act”)

1) Compliance with the Virtual Asset Protection Act

As the issuing company and the service operating company do not fall under the definition of “virtual asset service providers” under Article 2(2) of the Virtual Asset Protection Act, the requirements imposed under this Act (including but not limited to mandatory reserves, custody of virtual assets, insurance subscription, creation, retention, and destruction of transaction records) do not appear to apply to them.

However, under Article 10(1) (1), (2), and (4) of the Virtual Asset Protection Act, virtual asset issuers, their officers and employees, major shareholders, and persons who have entered into a contract with the virtual asset issuer for the conclusion or performance of that contract, etc., are prohibited from using undisclosed material information related to virtual assets for trading. Further, Article 10(2) through (4) Prohibit unfair trading practices, including market manipulation, fraudulent transactions, or disseminating false information, thus banning acts of unfair trading in virtual assets. Accordingly, in order to prevent any unfair trading activities by employees, major shareholders, or other related parties, each company is in the process of establishing internal control and monitoring systems as described below.

2) Existence of Control Measures to Ensure Compliance with the Virtual Asset Protection Act

As of the date this White Paper is provided, our Company plans to establish an internal control committee responsible for overseeing compliance with the Virtual Asset Protection Act and assessing the company’s internal status concerning anti-money laundering regulations. If necessary, we also plan to delegate these duties to an external advisory institution.

3) Existence of Countermeasures Against Market Manipulation

We intend to regularly detect relevant activities through our internal monitoring system and respond via a structured security measures process.

2. Privacy Policy

Our Company complies with the laws concerning the promotion of information and communications network use and information protection, the Personal Information Protection Act, as well as all other applicable regulations and guidelines that information and communications service providers are required to follow. In the event that we amend our Privacy Policy, we will Notify users through announcements on our website and application (or by individual notice via written document, fax, email, etc.).

The following details outline our personal information collection policy, which applies to the Pocket Gym service operated by our company.

1) Purpose of Collecting Personal Information

We collect personal information for purposes such as membership registration and management, the provision of goods or services, and marketing and advertising. The collected personal information will not be used for any purpose other than its original intent. If the purpose of use changes, we will obtain separate consent and take the necessary measures in compliance with applicable laws.

2) Items of Personal Information Collected and Methods of Collection

a) Items of Personal Information Collected

(1) Essential Information for Basic Service Provision

The Company collects only the minimum essential information required to provide basic services. When additional information is necessary to provide personalized services tailored to each customer's preferences and needs, we obtain separate consent before collecting such information. If a customer does not provide optional information, certain service functionalities may be restricted.

(2) Health Connect

When a user participates in a wearable quest, we request permission to synchronize data from Health Connect. The use of data received from Health Connect complies with its Permissions Policy, including the limited usage requirements.

(3) Information for Member Registration and Management

- For email sign-up: email address, date of birth, nickname
- For simplified sign-up: date of birth, nickname from Google, Apple, KakaoTalk, or Naver
- For the use and provision of goods or services: account holder's name, bank name, bank account number

(4) Information Measured and Generated by Devices

We collect information related to the number of days of the quest, ongoing quests, exercise records, body weight, and any images related to dietary intake, InBody scans, or "eye-body" (self-check) images.

We do not collect sensitive personal information that may infringe on the fundamental rights of Pocket Gym users. If it becomes unavoidable to collect such information, we will obtain explicit prior consent from the users.

b) Methods of Collecting Personal Information

Pocket Gym collects information through membership sign-up, the website, the mobile app, email, written forms (including surveys), fax, telephone calls and online counseling through the customer center, event applications, message boards, and automated information collection tools. For marketing and advertising, as the collected items may vary depending on the events held, we obtain separate consent where applicable.

Upon a customer's request or membership withdrawal, we immediately delete all personal information that can identify the individual. However, even after withdrawal, nicknames, reviews, comments, and other activity information that cannot identify an individual will remain unless the user directly deletes them. "If a user does not want these remaining activity records to be retained, the user must delete them before withdrawal or make a separate request. Users may request the deletion of activity information via the "Customer Center."

3) Lawful Processing of Personal Information

The Company processes users' personal information lawfully only when one of the following conditions is met. Should the information be used for a purpose other than those stated, we will obtain the user's consent in advance:

- a) Where the user has consented to the processing of his or her personal information
- b) Where the processing is necessary to perform a contract to which the user is a party, or to take steps at the user's request prior to entering into a contract
- c) Where it is necessary for member management, identity verification, etc.
- d) Where the processing is necessary for the performance of a contract regarding the services requested by the user, including fee payment and settlement, or for the fulfillment of the Company's legal obligations
- e) Where compliance with relevant laws, regulations, legal procedures, or government requests is required
- f) Where processing is necessary to protect the vital interests of the user or another person
- g) Where processing is necessary to detect, prevent, or address fraud, misuse, security threats, or technical issues that may harm the user or others
- h) Where the processing is necessary for the performance of a task carried out in the public interest or in the exercise of official authority vested in the Company; or
- i) Where the processing is necessary for the purposes of the legitimate interests pursued by the Company or by a third party (however, if the user is a child or otherwise requires special protection, and his or her interests or fundamental rights and freedoms override such legitimate interests, the legitimate interests shall not apply)

4) Disclosure and Provision of Collected Information to Third Parties

The Company processes users' personal information only within the scope set forth in this Privacy Policy and provides personal information to third parties only with the user's consent or if otherwise specifically required by law.

5) Cookies and Similar Technologies

The Company may collect non-personal aggregate information through "cookies." The cookies we collect are used to obtain information for purposes such as verifying login status, connecting users to specific applications or servers, analyzing website and application usage patterns,

assessing advertising effectiveness, tracking partner sites, error management, and conducting design tests.

Cookies are essential for the operation and improvement of certain Company functions and services. If cookies are not allowed, certain services (such as automatic login) may be restricted. However, cookies are not used for marketing purposes or to store users' internet browsing histories, and the information collected via cookies does not individually identify users.

Users have the option to allow or reject cookie installation. Therefore, by adjusting the settings in their web browsers, users may allow all cookies, be notified when cookies are stored, or refuse all cookies. However, if cookie installation is refused, the user may have difficulty using some of the services provided by our Company.

6) User Rights

As data subjects, users have the right to access, rectify, delete, restrict the processing of their personal information, request the provision or transfer of their personal information, object to certain processing activities, and object to automated individual decision-making (including profiling).

To exercise these rights, users may visit the "Edit Member Information" menu on the website or within the application or contact us (or the person in charge of personal information management, or an agent) in writing, by telephone, or by email. The Company will take necessary measures without undue delay. However, if there are legitimate legal grounds or equivalent justifications, the Company may refuse such requests.

The aforementioned rights may be exercised through a legal representative or an authorized agent, in which case a valid power of attorney must be submitted. The Company may verify whether the requesting party is the data subject or a duly authorized representative.

7) Security

To prevent unauthorized access, disclosure, use, or alteration of users' personal information, the Company has established the following security measures:

a) Encryption of Personal Information

- ☐ Users' personal information is transmitted through an encrypted communication channel.
- ☐ Critical information such as passwords is stored in encrypted form.

b) Measures Against Hacking, etc.

- ☐ To protect users' personal information from leakage or damage due to hacking or computer viruses, systems are placed in areas that are isolated from external access.
- ☐ An internal management plan is established and implemented.
- ☐ An access control system is installed and operated.
- ☐ Measures are taken to prevent forgery or alteration of access logs.

8) Retention and Use Period of Personal Information

If a user withdraws from the service, the Company promptly destroys the user's personal information that has passed its legally mandated retention period. If certain information must be retained under applicable laws, the Company will keep the relevant information for the statutory period before destroying it.

(If the content or duration of retention required by law changes due to an amendment, the amended legislation shall prevail over the provisions of this guideline):

- a) Records concerning contracts or withdrawal of an offer: 5 years (pursuant to the Act on Consumer Protection in Electronic Commerce, etc.)
- b) Records concerning payment and supply of goods, etc.: 5 years (pursuant to the Act on Consumer Protection in Electronic Commerce, etc.)
- c) Records concerning consumer complaints or dispute resolution: 3 years (pursuant to the Act on Consumer Protection in Electronic Commerce, etc.)
- d) Records concerning the collection/processing and use of credit information: 3 years (pursuant to the Act on the Use and Protection of Credit Information)
- e) Records concerning labeling/advertising: 6 months (pursuant to the Act on Consumer Protection in Electronic Commerce, etc.)
- f) Internet usage logs and access location information: 3 months (pursuant to the Protection of Communications Secrets Act)
- g) Other communications confirmation data: 12 months (pursuant to the Protection of Communications Secrets Act) or deleted immediately upon the user's request

9) Procedures and Methods for Destroying Personal Information

In principle, the Company destroys the relevant personal information without delay once the purpose of collection and use has been achieved. However, if certain information must be retained

under applicable laws, the information is retained for the period prescribed by such laws and then destroyed.

10) Technical and Managerial Measures for Personal Information Protection

To ensure the safety of personal information and prevent loss, theft, leakage, alteration, or damage, the Company implements the following technical and managerial measures:

a) Technical Measures

- Encryption measures for confidential information
- Installation and operation of antivirus software, etc.; and
- Installation and operation of access control systems

b) Managerial Measures

- Establishment and enforcement of an internal management plan
- Appointment of a Personal Information Protection Officer
- Training for personal information handlers
- Secure retention of access records to personal information processing systems
- Differentiated access permissions for personal information processing systems
- Procedures for controlling access to facilities that store personal information, and operation thereof; and
- Storage of documents or auxiliary storage media containing personal information in a secure location equipped with a locking device

11) Personal Information Manager

- Name: Sung Yoon
- Phone: +82-31-420-9707
- Contact: waveheal@happyhealthday.life

3. Matters Related to the Foreign Exchange Transactions Act and Anti-Money Laundering

This token may be purchased by anyone, domestic or foreign, through payment in legal tender of various countries on the Google app. As all transactions made via in-app (In-App) purchases are settled in KRW after being converted from USD, no issues arise in relation to the Foreign

Exchange Transactions Act. Apple and Google do not permit approval for payment systems if foreign exchange or anti-money laundering (AML) requirements are not met. Our Company has satisfied Apple and Google's requirements and provided necessary explanations regarding AML compliance, thereby obtaining approval.

Furthermore, this token is not designed for illegal activities such as money laundering, terrorist financing, or regulatory evasion, nor is it intended or likely to be used for such purposes.

4. Matters Related to the Financial Investment Services and Capital Markets Act (hereinafter referred to as the "Capital Markets Act")

This token is not deemed a security under the Capital Markets Act. Accordingly, in principle, neither the issuing company nor the service operating company is subject to regulation under the Capital Markets Act.

XI. Management’s Discussion and Analysis

1. Caution Regarding Forward-Looking Statements

This document contains “forward-looking statements,” which are our current expectations about future events. In plain terms, these statements describe our best guesses about what might happen going forward. Although we base these statements on our situation and financial performance as of 2025, no prediction about the future can be exact.

Our forward-looking statements rely on various assumptions, such as economic or market changes. However, these assumptions may turn out to be wrong. If they are, our actual outcomes could differ significantly from what we predict. Such differences may arise from internal factors (like management decisions) or external factors (like changes in exchange rates, government policies, or financial market conditions). For example, sudden fluctuations in exchange or interest rates, or unexpected shifts in our industry, could lead to results that differ from what is written here.

This document reflects conditions as of 2025 and will not be updated to include new risks or changes that occur after that date. Therefore, we cannot guarantee that our forecasts will come true or assure you that events will unfold exactly as expected. Please keep this in mind if you are considering an investment.

2. Overview

We are a newly established venture company, founded in November 2023. Our business centers on “wellness,” meaning a healthy and happy life. We are building an ecosystem that helps people engage in health-oriented activities online and offline. We motivate users by rewarding them for participating in online wellness activities, and these rewards can be used for wellness services in the offline world. Our goal is to create a “virtuous cycle wellness ecosystem” that seamlessly connects online and offline wellness.

To achieve this, we operate two apps: the “Pocket Gym” wellness app and the “PocketGym Move” walk-and-run app. Offline, we run a wellness complex called “Happyhealthday” on Turtle Island in Siheung-si, Gyeonggi Province, where users can redeem their online rewards.

Starting in 2025, we plan to develop technology that verifies real workouts through wearable devices and automates rewards. We aim to launch this feature in our existing apps by the first half of 2026. This function can address a long-standing issue: how to verify that people actually perform the exercises shown in fitness videos. It allows many people to enjoy the benefits of real workouts while receiving meaningful rewards. Through this, we expect to build a strong base of loyal users and achieve high monthly active users (MAU), which we believe can help us generate revenue—whether from ads or from linking our online user base to offline businesses (O2O).

3. Marketing Strategy and Performance

Our online app services collaborate with Samsung Health (Samsung Electronics). Beginning in 2025, we plan to work with the Siheung City Athletic Association to provide running-focused content, staying in sync with the latest running trends. By doing so, we expect to strengthen our collaboration with Samsung Health and attract more of its users to our services.

Our offline service, “Happy health day,” started operations in January 2024. During the first half of 2024, as we prepared the business, we earned about KRW 160 million in revenue. In the second half, once operations were in full swing, revenue rose by about 75%, to around KRW 290 million. We believe our focus on wellness tourism, wellness events (workshops, competitions, MICE, etc.), hands-on wellness content, and wellness-focused dining resonated well in the market.

We are especially optimistic about 2025, because it marks the launch of projects we discussed with various partners in late 2024. As a result, we expect to generate about KRW 1.4 billion in revenue for 2025—approximately a 210% increase over 2024.

As of 2025, our offline partners include:

1. Korea Tourism Organization – experiential MICE programs
2. Siheung City Tour – local tourism initiatives
3. Wave Park – Asia’s largest artificial surfing theme park
4. Wever – Korea’s leading workshop platform
5. Sihwa Hospital – the only general hospital in Siheung
6. BonDavinci – the largest digital exhibition service in Korea
7. Body Channel – a fitness chain operating 55 locations across Korea

We aim to sustain annual growth rates of over 100% for the next five years and will do our utmost to achieve this goal.

[Matters Concerning Listing]

I. General Matters Concerning Listing

1. Overview of Public Offering

As of the date of delivery of the white paper, it is not applicable.

2. Method of Public Offering

As of the date of delivery of the white paper, it is not applicable.

3. Method of Determining Public Offering Price

As of the date of delivery of the white paper, it is not applicable.

4. Matters concerning the allocation and receipt of token

As of the date of delivery of the white paper, it is not applicable.

5. Key Rights Contents of Token

As of the date of delivery of the white paper, it is not applicable.

6. Market for Public Offering (Exchange)

As of the date of delivery of the white paper, it is not applicable.

II. Investment Risks

Below, we outline key risks related to our business and the tokens we issue through our ICO (Initial Coin Offering). Other unforeseen issues could also affect our business or the value of our tokens. This list is not exhaustive, so please keep these factors in mind before you invest.

1. Risks Related to Domestic and Global Economic Conditions

1) Potential Global and Korean Economic Slowdown

The International Monetary Fund (IMF) projects a 3.2% growth rate for the global economy in both 2024 and 2025 (as of its October 2024 report). The Bank of Korea forecasts 2.4% growth for Korea in 2024 and 2.1% in 2025. Although a recovering semiconductor industry and investments in new growth areas seem positive, global uncertainties could slow economic recovery more than anticipated.

2) Possible Challenges in the Wellness Industry

Our wellness-focused business (health and happiness) depends heavily on consumers' willingness to spend. Prolonged economic downturns could reduce demand for our services, leading to lower revenue and business challenges. Investors should monitor overall economic conditions, as a downturn may hurt our growth and profits.

2. Risks in the Wellness Industry

1) Growth Prospects and Economic Sensitivity

While the wellness market has been expanding rapidly, if the economy weakens, consumers may cut back on wellness services, often considered non-essential.

2) Overly Positive Market Expectations ("Bubble" Risk)

Certain segments of the wellness industry may be overvalued due to highly optimistic projections, which could lead to a market bubble.

3) Stricter Regulations

As interest in wellness grows, laws and regulations for consumer protection and data privacy may tighten, potentially slowing the market's growth and increasing operating costs.

4) Intense Competition with Low Barriers to Entry

Digital wellness apps and online coaching platforms are relatively easy to launch, resulting in fierce competition. Large players like Samsung Health can leverage vast resources, making it challenging for

smaller companies or startups to secure a stable position. Even if the market expands, our ability to maintain revenue will rely on our unique technology, operational competence, and marketing. Falling short in these areas could reduce earnings.

3. Risks Related to the Sihwa Lake Tourism Business

We derive a portion of our revenue from tourism-related activities at Turtle Island near Sihwa Lake in Siheung City (such as Wave Park Caravan). However, the following risks apply:

1) Negative Environmental Perception

Sihwa Lake was previously polluted, and concerns remain that large-scale development could harm the local ecosystem. Environmental groups or local residents might oppose further development, potentially reducing tourist visits.

2) Limited Tourism Infrastructure

Some commercial properties near Sihwa Lake remain vacant. Transportation options from Seoul or other metropolitan areas may be inconvenient, and there may be inadequate accommodations or dining choices. Tourists may find it difficult to stay for an extended period.

3) Limited Tourism Content

Beyond Sihwa Lake itself, there are relatively few attractions or programs. Although marine leisure activities exist, low visibility and marketing efforts could limit visitor numbers.

4) Funding, Investment, and Policy Concerns

Development around Sihwa Lake and Turtle Island requires both private investment and support from Siheung City. If enough investment does not materialize, projects could be delayed. Policy changes could also delay or alter the “Turtle Island Private-Public Partnership” agreement. While we do not heavily depend on this partnership, any policy shifts may indirectly affect us, so we must stay prepared.

4. Risks Concerning Point Usage and Samsung Partnership

1) Relationship with Samsung Electronics

a) Content Development Contract (with Samsung Electronics)

- Squat Solution (Wave Hill) creates content that Samsung Health utilizes.

b) Development Service Contract (with Samsung Electronics)

- Squat Solution (Wave Hill) develops an app to display watch data on-screen.
- Samsung Electronics owns the completed work.

c) Supply Contract (with Jueun Information Systems)

- Jueun Information Systems provides us with Samsung Electronics appliances.

2) Impact of Closing the Points Mall

Previously, users could use points to purchase Samsung products (e.g., Galaxy Watches). Currently, the points mall is discontinued, and users can only use points (or tokens) at offline locations like Wave Park in Siheung. As a result, the utility and perceived value of these points and tokens could decline. While we are developing new services that integrate with the Galaxy Watch, if users do not find them compelling, it could negatively impact both our business outcomes and token value.

5. Additional Risks to Consider

Below are general ICO-related risks that may apply partially or entirely to our business. Please review these carefully before making an investment.

1) Volatility in the Cryptocurrency Market

- a) Price Swings: Digital assets often fluctuate more widely than stock prices. Market sentiment, regulation, and technical issues can cause sudden changes in token prices.
- b) Limited Liquidity: If exchange listings are delayed or if trading volumes are low, selling your tokens when desired may be difficult.

2) Regulatory and Legal Changes

- a) Regulatory Tightening: Some countries may restrict or ban cryptocurrency, making operations and token trading more difficult.
- b) Country-by-Country Differences: Operating across multiple countries means complying with varied regulations, which can become complicated.
- c) KYC/AML Obligations: Failure to meet Know Your Customer (KYC) or Anti-Money Laundering (AML) rules can result in legal penalties or hinder exchange listings.

3) Technical Concerns

- a) System Failures: Flaws in blockchain or smart contracts may lead to hacking, theft, or errors that harm token value and public trust.
- b) Data Breaches: Because our apps handle health-related data, strong security is crucial. A breach could lead to legal liabilities and a loss of trust.

4) Operational and Staffing Challenges

- a) Key Staff Departures: Losing essential personnel could disrupt development and service operations.
- b) Insufficient Funding: If early-stage fundraising falls short, we may not have enough resources for development or marketing.

5) Competition and Market Uncertainty

- a) Increasing Competition: Both wellness and blockchain sectors are growing more competitive.
- b) Uncertain Demand: Shifts in consumer preferences or emerging technologies might prevent us from meeting our goals.

6) Changes in Korean Regulations

Korea's cryptocurrency laws are evolving, and ICOs or token issuance could become more restricted. We will closely monitor and adapt to these changes, but stricter rules might delay listings or raise costs.

7) Geopolitical Risk and Inter-Korean Relations

Heightened tension on the Korean Peninsula could weaken investor sentiment and disrupt the broader economy, affecting funding and overseas operations.

8) Quantum Computing Threat

Future advances in quantum computing could undermine current blockchain security. We are studying countermeasures but may face serious issues if we fail to adapt.

9) Anti-Money Laundering (AML) Regulations

Because cryptocurrency can be misused for illicit activities, governments may strengthen AML regulations. Failure to comply can lead to legal trouble and limit partnerships.

10) Hacking Risk

A hacking incident could result in asset theft, data leakage, or service interruptions. Although we take security precautions, absolute safety cannot be guaranteed.

6. Conclusion and Investor Notice

We have outlined the primary risks associated with our business. Please review these risks carefully before making any investment decision. The cryptocurrency and blockchain sectors are more complex and regulated than traditional industries, making it essential to stay informed about legal, regulatory, and technical changes.

This white paper does not cover every possible risk, and new issues may emerge as we proceed. When deciding whether to invest, you should consider not only the information presented here but also your personal financial circumstances, your willingness to take on risks, and overall market conditions. This white paper and related materials do not constitute legal advice. If needed, please consult a qualified professional.

III. Purpose of Use Funds

1. Funding and Amount of Use Raised today

1) Cost of Service Development and Business

(Unit: Million KRW)

Category	Cost
Development of Mobile App & Online Services	450
Blockchain Module	150
Facility Investment	500
Hardware	200
Development of Fitness Contents	100
Labor and Operating expenses	700
Intellectual property rights, etc.	50
TOTAL	2,150

2) Current Status of Financing

(Unit: Million KRW)

Source of Funding	Amounts
Institutional investment	50
Private investment	1,420
Shareholder borrowing	200
Turnover	500
TOTAL	2,170

3) Financing Plan for Business Maintenance in 2025

(Unit: Million KRW)

Category	Amounts
Total sales of online/offline services	1,250
Software development and supply sales	100
Content development and supply sales	50
Borrowing from Korea Technology Finance Corporation	150
Sale of tokens for R&D purposes	600

TOTAL	2,150
-------	-------

2. Plan for the Use of Funds in 2025

(Unit: Million KRW)

Category	Amounts
Additional app development(point mall, etc.)/Updates and Maintenance	300
Maintenance of Blockchain Modules	100
Development of fitness contents	100
Patent & Intellectual property rights, etc.	50
Facility investment	150
Hardware	150
Business and Marketing for ecosystem expansion	150
Labor and Operating expenses	700
Investor Protection Reserves	300
TOTAL	2,000

3. Other Measures for Investor Protection

1) Lock up

Lockup is a system that requires early investors or foundations to hold tokens for a certain period of time, and can restrict token sales during the lockup period. This can contribute to protecting ordinary investors and establishing a public transaction order. The JUMONEY project is prepared to make a commitment that any penalties or disadvantages may be incurred for violating the lockup regulations discussed with the exchange.

2) Securing Investor Protection Reserves

As mentioned in the above fund use plan, the JUMONEY project will do its best to secure reserve funds for investor protection. In the event of loss to ordinary investors due to reasons attributable to the Company, serious mistakes, or defects in the project, we will take the best measures to protect investors by utilizing the reserve funds.

3) Encouraging Token's use in the ecosystem

If the JUMONEY project's attribution, gross mistakes, or flaws lead to the delisting of the exchange, resulting in losses to ordinary investors, we will take the best action to ensure that the facilities or services operated by this project will use goods or services equivalent to the value of Token held by investors.
